Spinal Immobilization - Supine Patient

Date: _____ Test Site Location: _____

Candidate's Name: _____

Evaluator's Name & Signature: _____ ☐ Pass / ☐ Fail

The evaluator advises the candidate, "Please apply a c-collar and then backboard this patient."	
Takes or verbalizes standard precautions	
Candidate places / maintains head in the neutral in-line position	
Turns over c-spine and directs assistant to maintain manual stabilization of the head	
Assesses motor, sensory, and circulatory function in each extremity	
Applies an appropriately sized cervical collar	
Directs movement of the patient onto the board without compromising the integrity of the spine	
Applies padding to voids between the torso and the board, as necessary	
Applies padding to voids behind the knees and the board, as necessary	
Immobilizes the patient's torso to the board	
Secures the patient's legs to the board	
Immobilizes the patient's head to the board	
Reassesses motor, sensory, and circulatory function in each extremity	

Critical Criteria

- Did not take or verbalize standard precautions (PPE)
- Did not immediately take manual immobilization of the head
- Released, or ordered release of, manual immobilization before head secured to backboard
- Patient manipulated, or moved excessively, causing potential spinal compromise
- Patient moves excessively up, down, left or right on the board after immobilization
- Head immobilization allows for excessive movement
- Upon completion of immobilization, head is not in neutral position
- DId not assess PMS function in each extremity before and after immobilization to the board
- Immobilized head to the board before securing the torso and legs
- Uses or orders a harmful intervention
- Exhibits unprofessional behavior
