Immobilization Skill - Traction Splint

Date: _____ Test Site Location: _____

Candidate's Name: _____

Evaluator's Name & Signature: _____ ☐ Pass / ☐ Fail

The evaluator advises the candidate of injury location.	
Takes or verbalizes standard precautions	
Candidate takes manual stabilization of the injured leg	
Directs assessment of motor, sensory, and circulatory function of the injured extremity	
The evaluator acknowledges, "The motor, sensory, and circulatory function are present and normal."	
Directs application of the ankle hitch	
Directs the application of manual traction	
Candidate prepares/adjusts splint to proper length using uninjured leg	
Candidate positions the splint next to the injured leg	
Candidate applies splint and ischial strap	
Candidate applies mechanical traction	
Candidate secures the leg to the splint	
Candidate re-evaluates that ischial strap and ankle hitch are secure	
Candidate reassesses motor, sensory, and circulatory function in the injured extremity	
The evaluator acknowledges, "The motor, sensory, and circulatory function are present and normal."	
The evaluator must ask the candidate how they would prepare the patient for transportation.	
Verbalizes securing the torso to the long board to immobilize the hip	
Verbalizes securing the splint to the long board to prevent movement of the splint	

Critical Criteria

- Did not take or verbalize standard precautions (PPE)
- Directs or causes a loss of traction at any point after it was applied
- Did not assess/reassess PMS function in the injured extremity before and after splinting
- The foot was excessively rotated or extended after splint was applied
- Did not secure the ischial steam before applying mechanical traction
- Final immobilization failed to support the femur or prevent rotation of the injured leg
- Uses or orders a harmful intervention
- Exhibits unprofessional behavior
